

## What Exactly Is Brow Threading?

Eyebrow threading is also said to be safer for those prone to post wax breakouts. Unlike tweezing, threading does not create ingrown hairs and is safer for all skin types. A good practitioner has light and painless movements with the thread and skin.

Although threading does involve a piece of thread held in the practitioner's mouth, the risk of contamination is little to none because the part of the thread making contact with the threader's mouth is not the same part as that making contact with the skin."

Threading isn't just for brow shaping, either. While the act does indeed remove unwanted brow hairs, threading can also target stubbles and peach fuzz that waxing would normally miss.

### The Benefits of Brow Threading

As opposed to waxing, tweezing, or lasers, threading is considered one of the safest and most precise methods of hair removal, especially in the delicate areas surrounding the eye. Threading allows the specialists to have greater control over which hairs are removed. The technique is also "100 percent natural," which means there are no artificial waxes, chemicals, or invasive techniques used during the procedure.

Even dermatologists are on board with the brow shaping technique. Threading to be one of the safest options as burns from waxing, particularly in clients who use retinoid or acne medication or have sensitive skin.
